Professional Summary

Second-year Computer Science student at the University of Information Technology (UIT), focused on Retrieval-Augmented Generation (RAG) systems and backend development with Python and FastAPI. Independently designed and built several end-to-end AI applications, including a Vietnamese legal-document question-answering system and a fully local RAG-based chat assistant. Seeking a software engineering or AI internship to apply these skills in a real-world production environment.

Education

University of Information Technology (UIT) - VNUHCM

Bachelor of Computer Science | GPA: 3.88/4.0

THPT Nguyen Thi Minh Khai

High School Diploma

Aug 2025 – Present

Ho Chi Minh City, Vietnam

Aug 2022 – May 2025

Ho Chi Minh City, Vietnam

Technical Skills

Languages: Python, C++, JavaScript, HTML/CSS, SQL

Backend & Frameworks: FastAPI

DevOps & Tools: Docker, Supabase, Cloudflare Workers/Pages, Google Cloud Run, Git

AI & Automation: Retrieval-Augmented Generation (RAG), FAISS, Ollama, Sentence-Transformers, n8n

Library: Numpy, Pandas, Matplotlib, Seaborn, Underthesea

English: IELTS Academic 6.5

Projects

Data Science UIT 2026 – Legal IR & QA System | *Python, NLP* | [GitHub](#)

Aug 2026 – Present

- Serving as **Core Backend Developer** on Team UIT-VstarK, responsible for the retrieval pipeline: processed and chunked a large corpus of Vietnamese legal documents, then built a hybrid search system combining keyword matching (BM25) with semantic embeddings to rank the most relevant clauses first.
- Built an automated question-answering pipeline that generates accurate, clearly-referenced answers to legal queries within a 5,000-character response limit, reducing unsupported or hallucinated answers.

Vonika – Personal AI Chat Assistant | *Python, FastAPI, Cloud Run* | [Live Demo](#) | [Github](#)

Aug 2026 – Present

- Engineered the entire system independently as a **Full-stack Developer**, building custom parsers for multiple file formats (PDF, DOCX, XLSX, JSON) to power a local knowledge base.
- Built a custom hybrid retrieval engine (BM25 & TF-IDF) optimized for Vietnamese text, then integrated it with an LLM to generate accurate answers, achieving an average response time under **15 seconds**.

Pokédex.io – Interactive Web Application | *HTML5, CSS3, JavaScript* | [Live Demo](#) | [Github](#)

Jul 2026

- Built the front end independently as a **Front-end Developer** using vanilla JavaScript, including search autocomplete and evolution-chain navigation for over **1,000 Pokémon species**, with optimized data fetching from the PokéAPI for fast, responsive rendering.

Extracurricular Activities

Data Science Challenge DSC-UIT 2026

Leader of Team UIT-VstarK – Legal IR & QA Track

Aug 2026 – Present

Ho Chi Minh City, Vietnam

Certifications

Crash Course on Python

Google / Coursera

Apr 2026

Gemini Certified Educator

Google for Education

Jan 2026

Data Manipulation and Data Visualization with Python (Score: 8.0)

Computer Science Center - VNU-HCM

Sep 2024

Fundamentals of Python (Score: 7.5)

Computer Science Center - VNU-HCM

Jul 2024

IELTS Academic – Band 6.5

British Council
